What Can You Do?

Introduction

I ran an engineering firm, designed modifications on off road motorcycles, and raced them in International competition winning many 1st places, medals, etc... My wife of 23 years got Cancer at the age of 38.

We knew nothing about health except to eat a balanced diet and exercise properly.

The doctor recommended chemotherapy and radiation. Naturally, frightened as we were, we let them do it and the doctor managed to kill her in less than a year.

I knew there was something wrong with that picture, so I started putting as much effort into health studies as I had into motorsports.

I went to the College of Life Science in Austin, Texas and received my doctorate in natural nutrition and I've never stopped researching the causes of our health problems.

I contracted Lyme disease about 14 years ago. Six years later, it showed up as several physical problems during a stressful situation. Since I had no tick bite it was three more painful years before Lyme was even considered.

The purpose of this small book is to alert you to the hidden epidemic and let you know whatever name they may put on your diagnosis, you can probably kick it out of your body for about \$25.00.

Almost no health problem is a death sentence. Just because you get sick doesn't mean you have to die from it. If you are not rushed into deadly therapy by the conventional health system, you might have a better chance of getting well by improving your immune system. Real health is built from the inside out, not by poisoning your body back to health.

For instance, concerning cancer, one of the leading authors on cancer said that most people will have cancer 5 to 6 times in a lifetime and they will never know it because the body takes care of it automatically.

Lyme Disease Non Medical Diagnosis and Treatment

How I Kicked Chronic Lyme disease in One Year for Pennies

Chapter 1:

How'd I Get Lyme Disease?

Synopsis

This chapter is covering the unusual way I got Lyme disease, what causes it and why it's seldom diagnosed correctly.

You will also learn what stress has to do with getting sick with a serious disease and the symptoms Lyme causes, and how Lyme Disease can hide for years in your body.

A little known fact: Lyme Disease is highly contagious.

How'd I Get Lyme Disease?

I had active Lyme Disease for 9 years before I figured out what was wrong. Neither any doctor nor I thought of Lyme Disease because I didn't get a tick bite and everybody believed the propaganda of the deer tick being the only way you get the disease. People who live in the city usually do not go into deer woods and cannot believe they might have Lyme Disease. Their doctors have the same mindset and do not consider such a disease and do not diagnosis it either.

A very smart bacteria is the cause of Lyme Disease

Not only is it hard to detect but also it is a smart bacteria that can avoid the traditional treatment with antibiotics. "Lyme bacteria have evolved ways to escape the effects of antibiotics and evade the immune system." Reports Leo Galland, M.D

A mosquito bit me, not the deer tick

I wondered about the mosquito bite I had gotten about ten years before. It didn't go away for months. Since then, I've found out you can get Lyme from any biting insect and from close contact with any person or pet that has it.

What is Lyme Disease?

Lyme Disease is caused by a tiny corkscrew shaped bacterium called Spirochete (Pronounced Spiro-kete). Spirochetes are spiral shaped bacteria, gram-negative, capable of spontaneously and independently traveling, sized from 3 to 500 micrometers long.

This type of bacteria causes 3 well-known communicable diseases:

- Syphilis
- Relapsing fever
- Lyme Disease (Borreliosis).

Both Syphilis and Lyme can cause a range of symptoms that belong to over 300 different diseases so, Lyme especially, is seldom diagnosed correctly because the patient may not have been bitten by any insect, let alone a tick. Therefore, the idea of Lyme disease as a possibility hardly ever enters the mind of an MD. Since it is a hidden epidemic meaning there is no media news, the average people do not know

they might easily get it from various means of which I will soon explain.

It might be interesting to note that everyone in a family and even the pets can be sick with the disease and each one can show entirely different symptoms.

The main reason for the many symptoms is that these bacteria set up their colonies in the weakest points in each body they invade therefore each person or animal may seem to have a completely different disease.

The many faces of the same disease

My body appeared to have Fibromyalgia and rheumatoid arthritis while my wife, Taylore, who got it from me, had severe digestive problems. Because of the very different symptoms very few doctors, either natural or allopathic, would ever guess we both had the same disease. The upshot is that many families all have Lyme disease and they are taking different medications. The sad thing is none of them are probably taking a remedy that addresses the real problem. There is only one proven solution that completely takes care of the problem and we will tell all about it soon.

Three forms of Lyme Disease

The Spirochete has the ability to hide in the body for years without being noticed & suddenly causes trouble after some stressful event.

It changes back and forth between 3 different forms therefore making it difficult to diagnosis because it looks like three dissimilar organisms.

The three forms of spirochetes are:

- Spiral shape - like a cork screw
- Cell wall deficient - means it does not have a cell wall in this stage
- Encysted means - it can form a cover around itself impervious to antibiotics.

Spirochetes are said to behave more intelligently than other bacteria

Some researchers think they are in many ways more evolved than other bacteria. They are said to almost show signs of animal-like behavior. Borrelia bacteria have a good transportation system, both forward and backward, where they can travel quickly all over the body. Other bacteria are non-motile, but the Borrelia have a distinct advantage in that they can move anywhere they please picking the best locations for their colonies.

Results of the Spirochete Colonies I felt were:

- Weakness
- Deep muscle pain
- Aching muscles
- Loss of strength
- Inability to get up from floor without help

I couldn't find out what was making my muscles so weak and painful-to-the-bone, including intense joint pain of osteoarthritis that also included my whole body? I couldn't even lift my legs or get up off the floor if I got down. After checking symptoms for several diseases, I finally found an alternative doctor who decided that I must have Lyme disease.

He recommended some natural products because we found in several places on the Internet that antibiotics don't really work well with the Lyme bacteria. They hide in an encasement until you stop taking the antibiotic and then come back and start multiplying again. We needed something that would instantly work so the little critters did not have time to hide. All this research has led us to our discovery that we will soon share with you.

The general experience of Lyme Disease sufferers goes something like this man's testimonial.

I became symptomatic with Lyme disease in February of 1999. At this time, I had thought for all practical purposes my life was over. Many days I felt that I could not even get out of bed. For those who don't know Lyme disease is an extremely debilitating as well as it is a difficult disease to diagnose and to treat. The Lyme spirochete is a hardier organism than the typical bacterium the conventional medicine arena is used to seeing and treating. The adaptability of the spirochete leads to infinite amount of problems with conventional treatment. The list of symptoms I experienced is endless including, joint pain, migraine headaches, memory loss, muscle twitches, extreme fatigue, abdominal discomfort, brain fog, etc... Basically anyone with full blown late stage Lyme disease is not living; they are merely suffering in a conscious coma.

By Jim P. who eventually recovered from Lyme disease.

Chapter 2:

A Well Hidden Epidemic?

Synopsis

In this chapter you will find out if you live where you could contract Lyme disease.

You will also understand why it is seldom diagnosed correctly and the magnitude of the epidemic.

Discover how the words you think and say about a disease can heal you or actually make your disease worse and make it a lifetime battle.

Learn the origin of the name for this close relative to syphilis, which belies its seriousness.

A Well Hidden Epidemic?

We personally used Chlorine Dioxide to get rid of Lyme disease we'd had almost 10 years. You notice I didn't say we cured it. The Lyme disease was very healthy & didn't need "curing".

Most of us say, "We want to cure a disease when we really want it to be gone." Since our words are LAW in our bodies, saying we want to "cure our disease" simply makes the disease stronger & us weaker!

Remember to love and support your body. Appreciate and be thankful for your wonderful body! Some people don't pay any attention to their body or what they feed it until it gets sick. Then they curse it for being weak or sick. Treat your body like a fine machine and a good friend!

If you were to use computer terminology to describe Lyme disease you would probably call it Syphilis 3.0. So how did this close relative of Syphilis get an innocent sounding name, like Lyme disease?

The first time it was diagnosed as a distinct disease separate from Syphilis was in Lyme, Connecticut. Lyme is very close to Plum Island, where the government does biological warfare experiments.

Regardless of how it came about, Lyme is as close to the perfect disease as you can get...

- It settles in the weakest point in each particular body
- Therefore it can have different symptoms for most everyone that has it
- It causes the symptoms of - or causes - over 300 different diseases
- It is seldom diagnosed correctly therefore treatments are usually ineffective
- Most people can maintain for years and spend thousands for these ineffective treatments
- It is very contagious and can be passed on to their children & pets
- The name of the disease doesn't sound the least bit scary
- The standard myth is that you can only get it from one variety of deer tick

It is an epidemic that is not even acknowledged to exist. It's still called a tick borne disease even though you can get it from any biting insect or from any body fluid from anyone who has it including your pets. Don't forget licking, sneezing, sweating,

kissing, transfusions and of course; sex transfers body fluids.

I believe a large portion of the population is already infected to some extent and it can only gain momentum.

By now many people are infected who have never been bitten and of course they have no clue to what is actually wrong.

All who have a sickness of any kind should check the symptom list to see if Lyme disease is a possibility.

Lyme Disease is everywhere, but doctors are not paying attention to it. Many people are misdiagnosed as having something altogether different such as: Crohn's disease, Fibromyalgia, or Lupus to name a few, but actually have the Lyme Disease bacteria.

List of some of the common misdiagnosed illnesses that seem to be caused by the Lyme disease spirochete:

- Chronic Fatigue Syndrome
- Colitis
- Early ALS
- Early Alzheimer's disease
- Encephalitis
- Fibromyalgia
- Fifth's disease
- Gastro esophageal Reflux disease
- Infectious Cystis
- Irritable Bowel Syndrome
- Juvenile Arthritis
- Lupus
- [Ménière's](#) Syndrome
- Multiple Sclerosis
- Neuro-cognitive difficulties
- New-onset fatigue
- Osteoarthritis
- Prostatitis
- Psoriatic Arthritis
- Psychiatric disorders (bipolar, depression, etc.)
- Reynaud's Syndrome
- Reactive Arthritis
- Rheumatoid Arthritis
- Scleroderma
- Sjogren's Syndrome
- Sleep disorders
- Thyroid disease

- Widespread pain for no particular reason
- Various other illnesses with confusing symptoms

Source: <http://canlyme.com/just-diagnosed/testing/common-misdiagnoses/>

Following are the latest statistics I could find about the Lyme disease epidemic

Lyme disease Statistics

Reported Lyme disease cases in the US have more than doubled since the US Centers for Disease Control (CDC) began recording cases in 1999. In 2007, 27,444 cases of Lyme disease were reported to the Center for Disease Control and Prevention (CDC) in the United States. (Just think of how many cases were missed!)

That is...

Following are the latest statistics I could find about the Lyme disease epidemic

- ...9 cases per 100,000k population
- ...2,287 cases per month
- ...77 per day
- ...3 people per hour

These statistics came from a recent newsletter on Lyme Disease from www.genesis2church.org by Jim Humble

This isn't even the tip of the iceberg...

The CDC has gone on record saying that they believe only 10-12% of Lyme disease cases are actually being reported to them.

So... multiply each statistic above by 10 or 12, and see how massive this epidemic truly is.

Many experts believe 300,000 people per year in the US are being infected with this disease.

If we follow the CDC's own under-reported criteria, 270,444 cases is the reality for 2007

Now, think about all of the other diseases an insect can transmit along with Lyme disease... The insect can be a mosquito, as in yellow fever or dengue fever; a flea, as in bubonic plague; a tick or any other biting insect, as in Lyme disease; or a louse, as in trench fever, Babesiosis as caused by microscopic parasites that infect red blood cells and are spread by certain ticks, Ehrlichiosis - flu like the symptoms, Rocky Mountain spotted fever, Bartonella - cat scratch disease ... The magnitude and variety of this epidemic is unknown.

Reported Cases of Lyme in the United States:

Lyme disease Statistics

United States of America

CDC Reported Cases = ■

You will notice from this chart that Lyme disease far surpasses the totals of all the other diseases they try to scare us with and there's not a peep from the news media's talking heads about this epidemic.

Chapter 3:

The Lyme Equation

Synopsis

You will learn why Lyme is called a vector-borne disease as well as what some of the symptoms can be and the reaction the doctors may have when you explain your symptoms to them.

How stress factors into the symptoms of Lyme disease and why one of the most inexpensive treatments will give you the best chance so far of success.

The Lyme Equation

Spirochete *Borrelia burgdorferi* sensu lato complex is the official name of the spiral shaped bacteria causing Lyme disease. Lyme is the principal and most numerous disease of the total vector-borne illnesses found in the Northern hemisphere of the world.

What is "Vector-borne disease"?

It is an illness caused by an infectious microbe that can be transmitted to people by biting insects. Arthropods (insects) or arachnids spiders or others with 8 legs) are those which most commonly serve as vectors as listed below:

- 1.) blood sucking insects such as, fleas, lice, biting flies mosquitoes and bugs, and
- 2.) arachnids such as ticks, mites and spiders.

The term "vector" refers to any arthropod that transmits a disease through insect feeding activity. Lyme is not only a vector-borne disease but can be passed person to person, to children, pets and others by contact.

Lyme disease is by far the most prominent and it counts for more than 95% of the vector borne cases of illness in the country. Lyme disease has far surpassed AIDS as one of the fastest growing infectious epidemics in the United States, with an expense to society of over \$1 billion annually.

Lyme Disease Symptoms

Lyme disease will affect multiple body systems and cause a wide range of symptoms. But not all people will suffer all symptoms. The incubation period from infection is around two weeks usually but can be shorter or even longer. It can hide in the body for years without noticeable symptoms and after a stressful situation, cause so many conflicting symptoms at once that the doctor believes you are a nut case and recommends a couch doctor (psychologist, psychiatrist, ect...).

The early infection location or contact area

The early localized infection is where Lyme disease didn't yet spread throughout your body. The only area is where the infection has first contacted the skin. The classic sign of early infection symptom is a circular red colour around the bite (if from the insect), the rash is red, could be target like and may be warm, itch some, but is in fact generally painless.

People can also suffer fever, malaise, and other flulike symptoms, headache, muscle

soreness, tender, aching, throbbing, burning, and gnawing pain. Also, Lyme disease can progress to later stages in patients who haven't developed a rash, a target-shaped sore or "bull's-eye" patch or any redness around the bite.

Early disseminated infections:

Within days to weeks after the onset of local infections the bacteria may begin to spread out throughout your blood stream, tissue and bones. Stress might cause almost dormant bacteria to circulate to other places in the body. The symptoms of early disseminated infections can be a purplish lump that develops on the ear lobe, nipple or scrotum. Other symptoms are pain in the muscles, joints, tendons, also dizziness and sometimes heart palpitations (3rd degree heart blocking).

Late disseminated infections:

After a few months the untreated patient can develop severe and chronic symptoms that affect many parts of the body, this also includes the brain, the nerves, the eyes, joints and even the heart. Many of these symptoms may become permanent if left untreated.

Victims of Lyme will find their access to simple, often used, memories is intermittent. The way this sometimes shows up for me is: I suddenly can't spell some simple word I've written thousands of times until I find a spelling book and re-boot it.

As I understand it from my studies all the necessary minerals and bacteria, which probiotics replenish, and come from natural grown foods, carry the same electrical charge as the body.

On the other hand all the other stuff (critters such as bad bacteria, viruses and their waste material, and toxic heavy metals) carry an opposite electrical charge.

Chlorine Dioxide carries the same electrical charge as the body so it instantly neutralizes any heavy metal critter or critter waste material that it comes in contact with; it is destroyed along with the stuff it neutralizes. Chlorine Dioxide only remains active in the body for about one hour so it's most effective if used every hour

The body's immune system already makes some Chlorine Dioxide so in effect you are simply strengthening the immune system's response to invaders.

We personally used Chlorine Dioxide to get rid of Lyme disease we'd had almost 10 years.

To kill Lyme it makes sense to me to use Chlorine Dioxide (water purifier also called MMS) it works instantly electrically, and even mechanically. The Chlorine dioxide reacts when it comes into contact with oppositely charged bacteria. It destroys them in moments.

Chapter 4:

Impossible or Incurable?

Synopsis

Learn how we found the simple way to kick most of the “incurable diseases,” how this interesting product was discovered, the three things it does, and...

Public proof it does things considered impossible by conventional medicine.

There is also a list of different names used for the product that neutralizes the spirochetes

Impossible or Incurable?

We got real lucky! After trying several recommended products that were supposed to control Lyme disease and only slowing it down a little, a friend told us about a water purifying product that we used to kick Lyme out of our bodies, and not just to control it. The secret we personally used to kill the Lyme disease spirochetes is Chlorine Dioxide.

In this application it is most commonly called MMS (Master Mineral Solution). It costs around \$25.00 USD for a years supply since only 3 drops are used for each treatment. It's very efficient but it's doubtful this solution will ever become mainstream because there's not enough profit in it for the pharmaceutical companies. This solution has been on the market for about 80 years as a water purifier. It gets rid of, rather than just managing a disease.

What is this master mineral solution?

Basically MMS is a water purifier and the chemical name is Chlorine Dioxide.

To kill Lyme it makes sense to me to use chlorine Dioxide (Water purifier also called MMS) because it is electrically drawn to oppositely charged items in the body and when they contact, they both go out of existence and become inert waste material and are naturally eliminated.

Jim Humble found, out of necessity, that Chlorine Dioxide tablets (water purification) not only killed bacteria in your drinking water while he was in the Venezuelan jungle, but worked to kill Malaria bugs inside a human body as well. They were five days by runner from conventional malaria medicine when his survey team got Malaria. He was the only one that hadn't got sick, so he figured the water purifier he was drinking might help them. As it turned out, it did help them get over the sickness almost immediately. This became his ministry and since he is an engineer he beefed it up to work better than the hiking and camping tablets most people take. He invented a two-bottle set of solutions for you to do it yourself.

You make Chlorine Dioxide at home on your kitchen counter top by combining one drop of Sodium Chlorite 28% with one drop of 50% Citric Acid* liquid or even use 5 drops of fresh lemon juice in a dry glass or plastic cup. The food acid is the activator.

*The 50% citric acid liquid is made by filling any size container ½ full of Citric acid powder & filling it up with distilled water. (Keep this

Simple formula and you have a 50/50% protocol)

I believe this solution was discovered in Russia in the 1800's. It has been used to purify community water supplies for over 80 years, especially in Europe, and has been sold as a handy kit for campers and explorers. It's been known to kill most all pathogens so it doesn't matter what disease you have been diagnosed with. It'll probably eliminate most bacteria, fungus, mold, and viruses in a person's body for less than 50 cents a week.

The Chlorine Dioxide (CD) in solution is a light to dark yellow colored liquid oxidizing agent and it has a chlorine-like smell. It is also a gas and the fumes are yellowish green color.

Different names for this water purifier

1. Jim Humble's Master Mineral Supplement
2. Sodium Chlorite 28%
3. MMS
4. Miracle Mineral Solution
5. Chlorine Dioxide (CD)
6. Water Purification Drops
7. Water Purification Solution

If you choose to take the water purifier start real slow, real slow. There is no rush! In fact, the worse your sickness the less you use to start so you don't kill so much stuff that the body gets sick trying to get rid of the trash (called a Herxheimer reaction).

This Water purifier only does three things:

- 1) Kills pathogens
- 2) Oxides their poop
- 3) Oxides heavy metals

The Water purifier does not heal the body. It does not cure disease. It helps the immune system kill pathogens and helps clean up the body. Only you can heal your body.

After 60+ years of use in the U.S. food industry and numerous research projects proving the safety of Chlorine Dioxide. Even as the Homeland Security has used it against killer-bacteria in so-called terrorist attacks, etc. The FDA has now decided it's unsafe for us to use it. Instead of people using a proven safe product that costs \$25.00 for up to a year's supply, they encourage us to use drugs developed by their Pharmaceutical Corporation buddies that cost several thousand dollars for about a

year's supply and most all drugs have harsh side effects. Chlorine Dioxide used as described by Jim Humble has no side effects.

Even if the FDA so-called approved drugs really did as good a job as this simple immune booster (MMS), couldn't the extra thousands be better spent by us -- as the down payment on a bigger house, new cars, etc. We could all use the extra money to live better and have more fun.

Isn't it odd that a supposedly independent government agency such as the F.D.A. does everything to protect the food and drug industries that they are supposed to protect us from?

When 10 yrs ago Jim Humble discovered that Chlorine Dioxide would kill all the Malaria in a person's blood in less than 24 hours, then why is Malaria still considered "incurable" and can only be "managed" by the health authorities?

Early in 2013 a local Red Cross branch in Uganda did a full-fledged scientific tests on 154 random people who were first tested and proved to have Malaria.

Within 24 hours all 154 of the Malaria patients were tested to be absolutely clear of Malaria. Understand this usually life-long disease was not just "managed" but clear gone; publicly proving Jim Humble's claims about Chlorine Dioxide are 100% correct. (Google Youtube.com Video <https://www.youtube.com> for proof.)

Do you think the benevolent International Red Cross will admit it? Would their corporate drug buddies stop donating to the Red Cross if they did admit it?

Malaria causes more than three hundred million acute illnesses and kills at least one million people every year.

It is estimated that 10 million people have used this water purifier despite the misinformation corporate paid bloggers have posted on the Internet about it being only a bleach and dangerous. Still there are hundreds of thousands of positive testimonials from people that have gotten rid of almost every kind of "incurable" disease including Malaria with Chlorine Dioxide.

(Note: If you spill or wipe some on your clothes it will change the color of the fabric.)

Chapter 5:

Spirochetes and Drug Salesmen

Synopsis

In this chapter you will learn how Spirochetes may be the major cause of the huge rash of joint replacements we hear about most every day from people we know.

A little about why we have the “side effect” riddled care industry we have today.

Learn how the MDs became drug sales people.

Spirochetes and Drug Salesmen

There's another aspect of spirochetes in general that's not usually addressed. They seem to congregate in joints and eat the cushioning out faster than the body can replace it. The usual diagnosis is – the joint is worn-out and must be replaced with a mechanical one that can't repair itself.

To me it makes more sense to evict the hungry little critters, eat a little healthier yourself, let the body do as it's designed to and build those joints back up.

Eat more live, fresh food – keep away from processed foods. Get on an anti-inflammatory diet. Just make 2 or 3 major changes at a time so as to not shock the body.

I recently talked to an acquaintance that had to have his artificial joint relined after 8 years. He wishes he hadn't let them do the surgery in the first place.

We have to remember those people are salesmen selling a \$60,000+ job for which they get a commission. Very few salesmen would suggest a \$25.00 natural remedy life-long fix alternative. You may not be aware of the history of so called main stream medicine. A very wealthy American family had huge interests in chemical corporations.

There was way more production capability than they were using. The family decided they needed more effective drug salesmen so they made large grants to medical schools to shape the education of those students. This way they were training them as drug salesmen.

Little by little the Rockefellers financially took over the medical schools, slowly changing the direction of healing away from natural remedies, and aiming the curriculums toward their advantage in pushing their pills by way of their huge grants. These medical doctors really became drug salesmen.

The scheme worked so well that real healers are now called alternative. It does not hurt their campaign that the corporations have bought up almost all of the news media, TV stations, magazines and radio stations. They effectively control what gets released as the “news” and we get only their side of their story.

That's a short version of how most of the world went from healing to controlling diseases and selling their corporate drugs.

Sound like a fairy tale?

You must understand the doctors are – for the most part – doing absolutely the best they can. They've been taken in by the scheme just like most of the rest of us. Many of them move into natural medicine or quit when the whole realization finally sinks in.

Do we hear about this on the mighty news?

Hardly! The news has all been bought up by the same interlocking corporations that own big pharmacies.

Don't believe this story? Look it up on the Internet; it is all available. Read "The Drug Story", and "The House of Rockefeller."

Chapter 6:

What Can You Do?

Synopsis

In this chapter you will find out about some of the co-infections that may accompany the Lyme bacteria and about documented testing of many being treated for other diseases and actually have Lyme disease.

You will find a symptoms list to check yourself to see if Lyme is likely your problem.

More about ex-aerospace engineer Jim Humble who accidentally discovered how useful Chlorine Dioxide is for killing bacteria.

What Can You Do?

One good reason to use a broad spectrum product like MMS (Water Purification Drops) to kick Lyme disease is because Lyme doesn't always get deposited into your body alone. Any biting insect can carry Lyme along with several other little known buddies. Three of the most common co-infections are: Babesia, Bartonella & Mycoplasma Fermentans. Any of these along with Lyme will confuse the diagnosis even more, along with making it even more unlikely that a focused antibiotic will clear your infections.

Even though it's seldom acknowledged, Lyme disease & its buddies are the most common diseases in the northern hemisphere.

The myth the medical mainstream continues to mouth is that it's only a tick borne disease. They generally ask if you've been camping, hiking, hunting etc. If you haven't then you couldn't have Lyme disease.

As far back as 1995 transmission of the disease has been clearly documented after bites by mites, fleas, mosquitoes, spiders and ticks.

Dr. Lida Mattman, Author of "Cell Wall Deficient Forms: Stealth Pathogens (CRC Press 2000)", has been able to recover live Lyme Spirochetes from mosquitoes, fleas, mites, semen, urine, blood, Tears and Spinal fluid. In 1995 Dr. Mattman obtained positive cultures of Lyme (Borelliosis) from 43 of 47 chronically ill persons.

All 8 of the cases of Parkinson's disease she tested actually had Lymes.

21 cases of Amyotrophic Lateral Sclerosis (Als) and every tested case of Alzheimer's all actually had Lyme disease.

She later obtained cultures from 25 patients with fibromyalgia, all were positive for the cell wall deficient form of the Lyme Spirochete.

Since most antibiotics kill bacteria by breaking down the cell wall they have very little effect on your critters without a cell wall to break down. Dr. Lida Mattman was a biology Professor and a bacteriologist.

Lyme disease is just like its sister disease Syphilis in the fact that it is highly contagious.

Since the bacteria can be found in all the body fluids including saliva and tears. It could be transferred by a kiss, drinking and eating from the same utensils. It could come out of a skin lesion or scrape. A dog licking you or your kids can transport the

bacteria. It can be airborne, too, from a sneeze, cough, etc...

It's very easy for a whole family to be infected even though each may show entirely different symptoms.

If you look at it under a powerful enough microscope, you will see the bacteria that looks like tiny snakes. The causative agent of Lyme disease *Borrelia Burgdorferi* looks like a coiled snake, as well as syphilis. Syphilis is acquired through contact with infected mucus membranes. Mucus membranes that can be infected on our body are the mouth and lips, vagina, penis and rectum. The eye can be infected also and for many years when syphilis was a bigger problem all newborns were treated with silver nitrate in each eye to prevent infection. Therefore, Syphilis and Lyme disease can be acquired through unprotected oral, vaginal and rectal sex and during birth if the mother has an active infection. Somehow it is very difficult to identify those microorganisms that look like little snakes.

Lyme disease is now impossible to be diagnosed accurately because the two best tests for the disease are no longer available (i.e., Dr. Lida Mattman's Blood Culture Technique and Dr. JoAnne Whitaker's Q-RIBb test). These tests were foolproof because growing spirochaetes out of the blood or visualising pieces of spirochaetes in blood samples constitutes undeniable proof of diagnosis. Why did these tests never become mainstream?

Remember any body fluid, even a sneeze, from an infected person or animal can transmit Lyme disease! Millions of people are infected and most don't even have a clue that's what's wrong! The good news is the Water purifiers made from Sodium Chlorite & Citric acid usually kicks it in a few mouths.

What are the symptoms of Lyme Disease?

I had several of those symptoms which indicated that it was probable that I had Lyme disease even before I was tested. Check the list & see how many of the following symptoms you have. These are common symptoms of people who have Lyme disease to some degree. Circle the numbers that apply.

1. Unusual chills, fevers, sweats or flushing
2. Unusual weight loss or gain
3. Unusual hair loss
4. Tiredness, lack of stamina, fatigue
5. Swollen Glands
6. Throat sore
7. Pelvic Pain or testicle pain
8. Bladders irritable or poor function
9. Unusual menstrual irregularity
10. Sexual – loss of libido, dysfunction
11. Abdominal pain or poor digestion
12. Regularity changes – diarrhea, constipation

13. Sore ribs or pain in chest
14. Pulse skips
15. Pain or swelling in joints: Which ones?
16. Breast pain, unexplained milk production
17. Joint & back stiffness
18. Muscles twitching: especially in face
19. Hear/feel cracking when turning neck
20. Cramps or pain in muscles
21. Neck pain or stiffness
22. Headache
23. Blurry vision, sensitive to light
24. Ear pain, sensitive to sounds
25. Occasional Vertigo, poor balance
26. Sudden need to lie down or sit
27. Suddenly unable to spell simple words
28. Short term memory poor
29. Concentration difficult
30. Getting lost, hard to find car in parking lot
31. Mood swings, anger, depression
32. Sleep disturbances – Wake early etc.
33. Tremors
34. Swollen tissue, rashes, oozing fluid
35. More sensitive to alcoholic drinks

Several of these numbers circled may indicate, you should take action.

Getting back to kicking Lyme disease: My hands were hurting and had been swollen for two years so I couldn't close them. After 3 weeks use of the water purifier (Chlorine Dioxide) the swelling was gone & I continued to get better at a kind of progressive rate for the next several months & was completely over the various symptoms in a year.

I continued regular use of Chlorine Dioxide for about another year to make sure.

Since then, I've talked to dozens of people who've spent thousands of dollars and 20 to 30 years trying to get rid of Lyme disease with few results if any from using traditional treatments.

It's well known that our bodies are 70% to 80% water so it makes perfect sense to purify that water. I understand our body's immune system makes a small amount of this Chlorine Dioxide - the purifier already. We're simply helping our immune system do a better job in spite of today's greatly expanded pollution. I consider it a natural way to improve my body's resistance to pathogens and clean house

Water Purifier is easy to make – just combine two products: Sodium Chlorite and Citric Acid are combined in a small 1 to 1 drop solution at the time of use to form Chlorine Dioxide. Most people will work up to 3 drops an hour for 8 hours a day.

There are only three changes water purifier can make:

1. Kill Pathogens
2. Oxidize the pathogen's waste material (they are not house broke, you know!)
3. Oxidize heavy metals.

During this oxidation process the Water Purifier is also destroyed and it most all happens within the 1st hour of use. For this reason it's recommended that some WP be taken every hour to keep a pressure on whatever you're trying to kick. I simply put my drops in a ½ glass of water after they'd been activated and combined in the dry glass for 30 seconds.

They are clear when they are put in the dry glass and change to a yellow color after the 20 seconds of activation.

Note: The drops must be combined in a dry container and wait 20 seconds before they are put into the water.

Since they are so efficient at killing pathogens the worse the problem the fewer the drops you start with so you don't kill too much trash at once and overload the bodies elimination systems.

I'm a researcher and a student of life experiences. I'm not a doctor & not even a Veterinarian so I can't make any kind of a recommendation for you to use the product or not. It worked for us! The book that explains it all is "The Master Mineral Solution of the Third Millennium" by ex Aero-Space engineer Jim Humble.

Jim accidentally discovered it would cure Malaria while working in the South American jungle.

Being an avid researcher he spent several years experimenting with Chlorine Dioxide after his return so he could understand what was happening. He immediately knew if he tried to patent & make money from his discoveries the Big Pharmacy would swat him like a bug. Instead he slowly slipped it into common use all over the world at his own expense and with the help of friends so the people wouldn't be deprived of yet another simple inexpensive healing agent.

Jim still spends thousands of dollars travelling all over the world introducing MMS discreetly to small groups of sick people. Malaria alone kills at least a million people every year in the tropics, many of them children.

One branch of the Red Cross did a 154-person test in Uganda & proved Jim Humble's claim that all were cured.

In the blood it's easier to kick out the critters than getting rid of those that scatter throughout the body tissue, connective tissue, cartilage and bones. Malaria is a disease of the blood that is caused by the Plasmodium parasite, which is transmitted from person to person by a particular type of mosquito.

This is why curing Malaria - a blood disease - is quicker than treating Lyme disease where the spirochetes are in the deep tissue, joints and bones. The water purifier solution easily and quickly goes into the blood system right after it leaves the stomach. Healing Malaria (killing the Plasmodium parasite) with the water purifier may only take 24 hours to a couple days.

You can get expensive tests at hundreds of dollars each so you can brag about the brand name of your sickness or spend \$25.00 for a set of WP and personally take responsibility for researching and taking care of your problem.

If the problems go away, who cares what the official name was? I consider the \$500 I spent on tests a total waste of money. The symptoms list would have done that at zero cost.

We did the latter and are forever grateful to Jim Humble for being one of the few inventors who really understands how the Earth's greedy health care system works. He knew a simple inexpensive remedy would never be tolerated by big business and their captive F.D.A. So Humble followed his heart and gave it directly to the people.
